### REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: No prior art has been found or presented that either teaches or fairly suggests the production of a laminated structure comprising a first substrate, a second substrate, and a pressure sensitive hot melt adhesive bonding the first substrate and the second substrate to one another, wherein the adhesive includes an amorphous poly-alpha-olefin and a crystalline polypropylene having a degree of crystallinity of at least about 40%, said amorphous poly-alpha-olefin comprising a butene-1 terpolymer or copolymer that may be produced with ethylene and propylene comonomers, as recited and claimed. The specific recitations of molecular weights for the components, and the melt index for the blend composition are neither anticipated, nor rendered obvious, by the teachings of the reference to Tsurutani et al, although that reference teaches the use of 1-butene copolymers admixed with polypropylene. Since there are no other outstanding issues with regard to the clarity or enablement of the claims, these claims are deemed to contain allowable subject matter.

The references to Karandinos et al and Brant, both newly cited of interest, teach the manufacture of polymer blends of polypropylene with an alpha-olefin copolymer, as claimed. While the reference to Karandinos teaches a blend of polypropylene, an amorphous poly alpha olefin is not shown specifically. Note the Summary beginning at column 4. while Brant shows the contemplated poly alpha olefin, the weight average molecular weight disclosed is too low to function in the instant invention. Note the Abstract.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
